(Red)

Current FIT III dioxin-sampling operations have created the need for disposing of decontaminating liquid and solid wastes which potentially might contain low-levels (less than 10ppb) of dioxin.

Eight hazardous waste disposal companies were contacted (see listing below) on June 20 and June 21, 1983 as to whether they would be able to accept this waste. All but one organization, RTS, Inc., said no outright because of the potential bad publicity they might receive. RTS, Inc. initially agreed to accept the waste for a fee of \$145 per 55-gallon drum which included them picking up the waste here at the Wayne office. However, on June 21, they reversed their decision based on potential bad publicity they might receive. RTS, Inc. did, however, recommend Atlantic Coast Environmental, Inc. in Dover, Delaware as a possible disposal company willing to accept this waste.

After contacting Ron ^{*Raboin*} ~~Raboin~~ of Atlantic Coast Environmental, Inc. in Dover, Delaware, he agreed to accept the waste delivered to his facility in Dover at a cost of \$107 per 55-gallon drum. He has also agreed to ship the waste to Chemical Waste Management, Inc. in Emelle, Alabama for final disposal.

Waste Disposal Companies contacted:

Eldredge, Inc.
Rollins Environmental Services, Inc.
East Coast Pollution Control, Inc.
Delaware Container Co., Inc.
F.T.C. Hazardous, Inc.
Resource Technology Services, Inc.
SCA Chemical Services, Inc.
Waste Conversion

Please award a subcontract to:
